# TrialPal.

Our eCOA/ePRO DCT mobile and web application is subjects clinical trials best friend. A simple to use solution that works even when subjects lose internet connection and contains a differentiating factor for vaccine clinical trials, providing sites with immediate notifications regarding adverse events, sending stakeholders automatic alerts, and giving access to real-time dashboards with subject status, eDiary adherence and reports to improve decision-making.

### **TrialPal** Modules

Forms and

Surveillance

This module allows clinical trial

with information to the research

center. It is ideal for surveillance

studies where participants must report their health status

periodically for long periods of

any type of form including QoL

time. It is also used to create

participants to report actions

#### e-Diary

Diaries are used in clinical trials where researchers want to gather information after each vaccination or medication. With this module, the information reported by patients is shared in realtime, in order to enable site staff to know what is happening with each patient

We also improve the information quality creating validations inside the App which allows minimizing typing errors.

#### Symptoms Report symptoms and

information.

its severities in one touch. **Contact Requests** Notify that a participant

#### Hospitalizations

wants to receive help or

Inform that a participant has been to an ER or is hospitalized.

#### Chat

The Chat module is designed to improve communication between the subjects and the site. It provides all the tools of traceability and safety ensuring that all conversations related to the study remain registered in our databases.

Site users are able to review the conversations related to study subjects or tutors. It is the best way to stay in touch with patients.

#### The Focus of the e-diary

E-Diary is a module of our Trial Pal App which uses technology to improve **patient** gathering information after each vaccination or medication.

The information reported by patients is shared in **real-time** though a dashboard making patient follow-up process simple giving knowledge about what happened with each patient.

We also improve the quality of information creating validations inside the App forms which allows minimizing typing errors.

The TrialSite management console enables participant enrollment and set-up study protocol, forms, notifications, alerts, and reports. Get multiple views of the eCOA/ePRO data entry status, reporting performance analytics and data precision. Made agile study start-ups with the on-off architecture; this module interface is intuitive and requires low-burden implementation and support time.

- Patient's cards with eDiary information
- eDiary Assesment
- Patient reporting adherence metrics in real-time
- Participants groups customization
- Download the PDF patient card report to add to EMR quickly
- Audit trail
- Set up e-mail notifications for specific symptoms and levels.

Set-up and remote monitoring of:

- Visits
- Alerts
- Symptomatology
- Surveillance Reports
- Temperature
- Point of care
- Medicines
- Multimedia

Integra IT has innovated to develop a new data collection channel option for the TrialPal (eCOA/ePRO) solution through a USSD dial pad flow.

USSD (Unstructured Supplementary Service Data) is a mobile communication channel that doesn't require an internet connection, just a telecom network to capture data. This channel opens ePRO/eCOA possibilities in countries or regions lacking internet coverage. USSD allows reaching more participants, more diverse, through cell phones (no smartphones) by a BYOD or devise provision model; thus reducing operational costs and technology adoption barriers.

This channel has shown significant benefits in regions like Sub-Saharan Africa, where it is used for banking and other services, gaining trust and comfort among the population and bringing access to basic digital services.

### Customer Success Story.

A German sponsor for a Phase II Covid-19 study with a Global CRO, conducted a Phase 2 dose confirmation clinical trial to evaluate the safety, reactogenicity and immunogenicity of the COVID-19 vaccine. Peru enrolled 335 participants over a 3-month period.

The information gathered from this group of volunteers was collected using TrialPal developed by Integra IT.

#### Lessons Learned

- Thanks to the experience with our application in this Covid-19 study, the site was better prepared for the Phase III study which included thousands of subjects, as well as the management of applications.
- As reported by the site, the Integra applications used for the study were very easy to use and had much more information accessible to investigators and participants, allowing timely decision-making.
- Integra IT support directly on site during the enrollment process facilitated patient engagement, training and cell phone provision when BYOD was not an option. This worked even at the beginning of the study when the health context of the pandemic made it complicated.

Real time reports similar to this one as part of the DSMB, helped evaluate safety findings in a Polio Study, in order to approve within one day the continuity of the study.

# Security in Software as a Service.

Our solutions are offered under a Software as a Service (SaaS) secure model. This means that your data is hosted on a private server with the latest technology and safety, following the highest industry standards such as HIPAA, FDA 21 CFR Part 11, ITIL, ICH and ISO 27001.

# Our **Experience**.

Our company was created to develop and operate complex trials for the health and clinical research industries. Our team, processes and strategy are focused in helping clinical trials sites and CROs implementing technology solutions such as mobile Apps and web platforms.

Our main goal as a company is to support our customers in improving their data collection processes, reduce the communication gaps with their subjects and improve their clinical trials operations from subjects recruitment (CRM) to billing according to Study milestones.
